

## Amendments to the Specification

Please replace the paragraph in the specification beginning on page 25, line 31, and ending on page 26, line 11, with the following replacement paragraph:

In the illustrative menu screen [[802]] of FIG. 7E, for example, a group highlight, such as group highlight 806, may be displayed around the cells of regions to which the user has not navigated. A navigation highlight, such as navigation highlight 808, may be displayed around the cells of the region to which the user has navigated. In this embodiment, a navigation highlight, such as navigation highlight 808, may be displayed around a region to indicate to the user to which region the user has navigated. Group highlight 806 may be displayed around a region when the user has not navigated to that region. This example is merely illustrative. Any suitable approach to indicate to the user to which region the user has navigated may be used.

Please replace the paragraph in the specification beginning on page 33, line 5, and ending on page 33, line 17, with the following replacement paragraph:

In another suitable approach, entities may be arranged in any suitable sequence. For example, entities may be arranged according to alphabetical order (e.g., by call letters of television channels), according to fees paid by the entities (e.g., the higher the fee, the closer to the

beginning of the sequence), or according to any other suitable ordering technique. When the interactive television application is commanded to "page" and the number of entities that remain in the sequence is less than the number of cells that are displayed, the sequence may "wrap around" to the beginning of the sequence. This is illustrated for example in illustrative menu screens 1102 and 1104 of FIGS. 12B and 12C, respectively.
